I am interested in MORE DETAIL REGARDING OPIOID RELATED BEST PRACTICES.

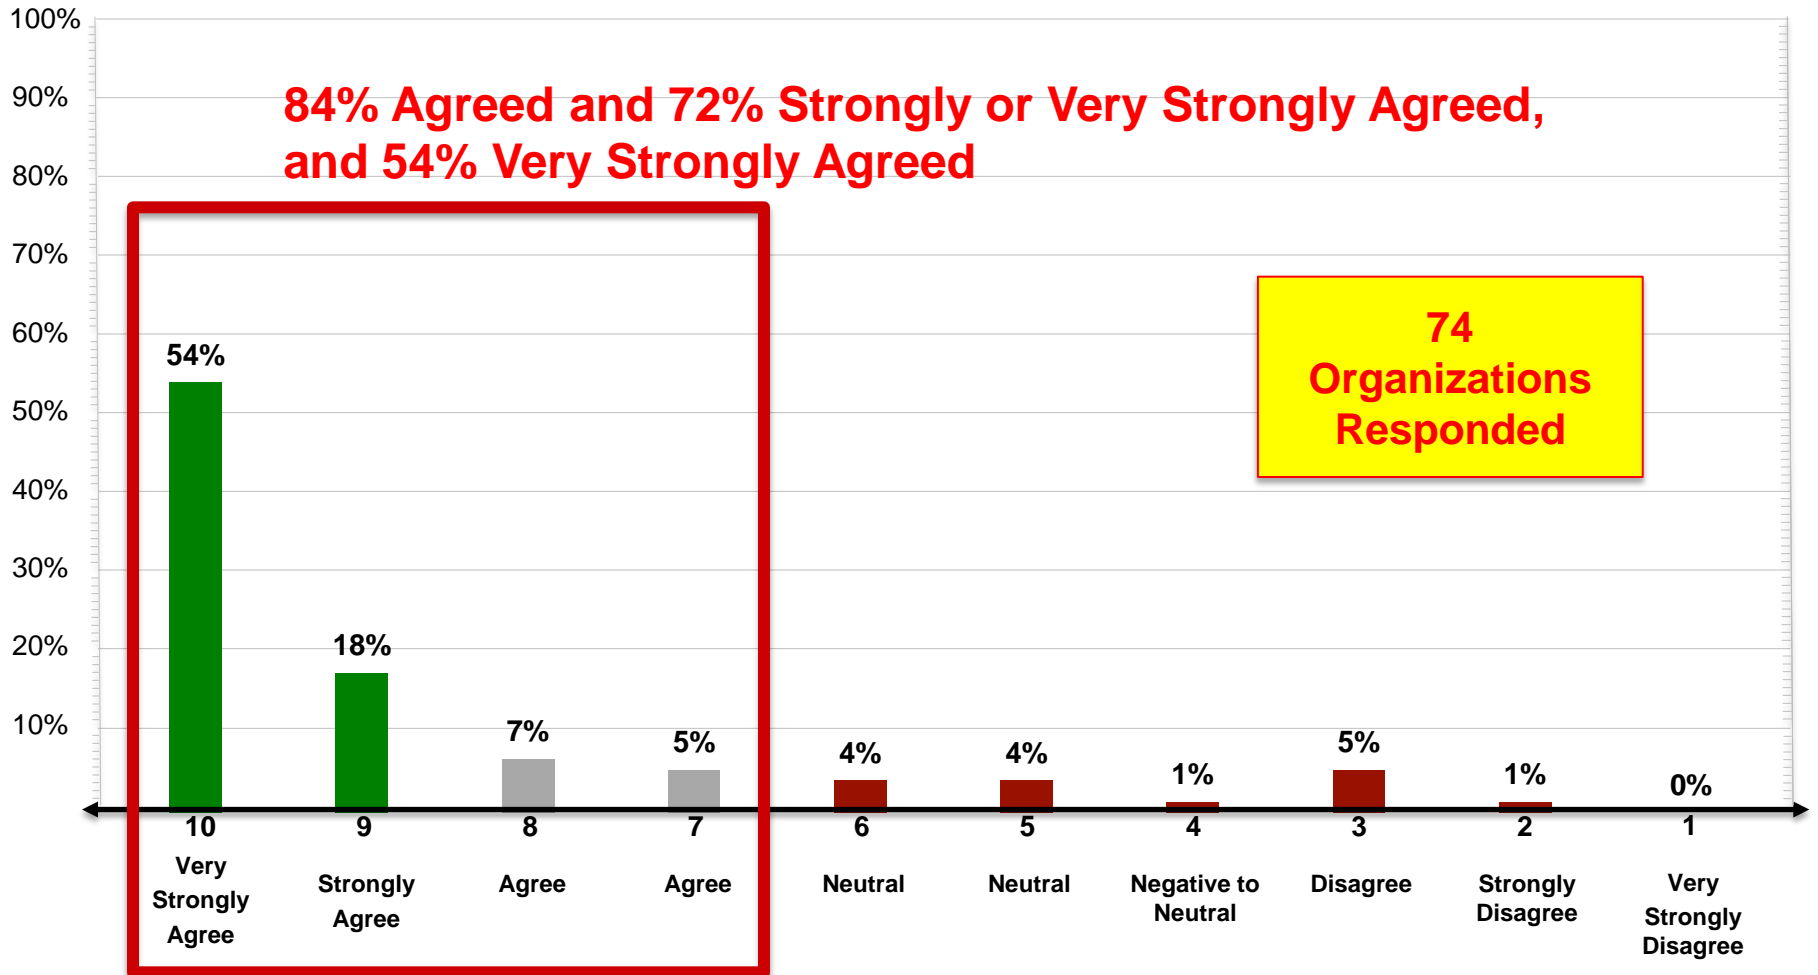

Source: TMIT High Performer Webinar Series; The Opioid Crisis: New Threats to Caregivers: – July 20, 2017

Specific OPIOID RELATED BEST PRACTICES TOPICS I would like to be FURTHER covered include:

- Algorithms for internal medicine and PCP providers
- Alternate therapies
- Methadone; addiction management in acute or chronic pain
- Medical diversion in hospitals and clinics
- How to follow up for suspected diversion
- How doctors and nurses can operationalize opioid best practice
- Alternatives for patients and what's payable
- Recommendations on how to curb opioid prescribing in acute care settings.
- How opioid use in inpatient settings impact opioid crisis
- What if any precautions/prevention is occurring in school systems to combat opioid overdose.
- Understand prescribing laws and practices for identifying and preventing opioid abuse
- Prevention of accidental overdose in ED personnel
- Address best practice for weaning patients off chronic opioid use
- What can hospitals do with inpatients that continue to have illicit brought to them from the outside, taking them, then overdosing. Nursing staff stress in dealing with this patient population.
- Ongoing information of developing best practices
- CDC and SAMHSA updates
- We are interested in best practices by setting. Best practices for physicians, for pharmacists, for hospitals and ER.
- How to uncover diverters in hospitals
- Care of the patient with chronic back pain and fibromyalgia
- Tapering opioid medication
- Any and all topics; first responder education/best practices
- Naloxone administration education - what should it include? 2. Care for the caregivers
 - what are the psychological issues for caregivers?
- More detail regarding caregiver diversion
- Physician office related issues related to opioids/controlled substances storage/management, staff and patient
- 51% of prescribed opioids in this country are consumed by individuals who have a diagnosed mental illness, regardless that only 16% of our population are those who have a mental illness. I've not seen anything that addresses this issue in the midst of the opioid craze.
- How should prescribers for chronic opioid therapy in personal patients document in his EHR?
- How to manage controlling patients pain inpatient while not adding to risk of addiction
- Guidelines for ER clinicians as well as family practice providers. Best practices for communities including schools, law enforcement, parents, etc. Education on recognizing signs of opioid use. Options for referring patients for treatment.
- Hospital definitive care to repair injuries
- Primary care - medical offices - practical ways to save lives
- Drugs of choice for acute conditions
- Keeping staff safe--move discussion more toward the caregiver not the opioid user/addiction.
- How to respond from ED to parking lot to assist patients
- Patient education, inpatient considerations
- 5 rights
- Hospital initiatives to address inpatients admitted with OUD and not miss an opportunity for initiation of addiction treatment
- Alternatives to pain management.
- Best practices for monitoring facility use per user; treatment programs compared for effectiveness; community programs for follow-up treatment
- Inpatient treatment for inpatients- mostly endocarditis requiring long term ABX may need valve surgery, can't send home with PICC line

Anonymous Survey Questions

I am interested in MORE DETAIL REGARDING CAREGIVER DIVERSION.

Source: TMIT High Performer Webinar Series; The Opioid Crisis: New Threats to Caregivers: – July 20, 2017

Specific CAREGIVER DRUG DIVERSION TOPICS I would like to be FURTHER covered include:

- How to follow up for suspected diversion
- How to get ahead of caregiver diversion
- What i need to look for or be more aware of
- What are options
- How to identify 2/132 (2%)
- How to address the addicted opioid adult family member (intervention) to ove toward weaning.
- Recognition and behavioral indicators
- More information on diagnosis of back pain etc. And what other pain relieving measures work for patients such as back pain, surgery pain etc.
- We would be interested in addressing this topic broken down by various settings, as applicable.
- More training for providers on pain management
- Diversion in ambulatory setting (provider offices, iccs etc.)
- Education and safety of ed and nursing staff; school personnel
- How to work closely with caregiver drug diversion in the healthcare setting
- Related to physician office practices
- How to deal with reducing use oor doses of opioid in longtermchronic intractable pain patients in one's practice?
- How to approach peers who you suspect
- Best methods of detections
- Management of substance use disorder patients in acute care; best practice for rallying community resources; healthcare worker diversion; would an addict's story shed light for us as healthcare providers; how to overcome the stigma of addiction and the moral lens it is viewed through; best communication skills for healthcare workers to talk to patients with substance use disorders; enabling and codependency; we have many initiatives - how can we get all of us together to roll this forward in unison?
- I will take it all :)
- Monitoring methods; lock up recommendations for home use;
- Very intersting discussion today more info in protecting us as caregivers
